

Replacement of A Dock at CBHA

Marine Floats' Upcoming Project

Marine Floats, a reputable contractor in Tacoma, WA, has been entrusted with the significant task of replacing A dock due to the damage by the sea lion population. This project represents necessary progress for the marina.

Securing Necessary Permits

The initial phase of the project involves obtaining the required permits, a process that Marine Floats has already commenced. They are working diligently to secure permissions from Thurston County, the Department of Natural Resources (DNR), and the Washington Department of Fish and Wildlife (WA DFW). These permits are essential to ensure that the construction adheres to environmental guidelines and legal requirements.

Timeline and Construction

The construction of the new A dock is scheduled to begin in early May. This timeline has been carefully planned to accommodate the necessary preparatory work and permit acquisitions. Marine Floats aims to complete the project by early July, ensuring minimal disruption to the waterfront activities during the peak summer months.

Impact and Benefits

Replacing the dock will prevent future sea lion habitation and incorporate safety features that meet community requirements.

Marine Floats' project seeks to enhance CBHA's waterfront infrastructure by ensuring effective planning and implementation.
